

# Your Bespoke Pump Kit Process: FROM CONCEPT TO CREATION!

## SELECTING YOUR COMPONENTS

Select your pump, flow meter, filter, nozzle, delivery and suction hose from our range, with recommendations from our technical team.

## DEVELOPING YOUR PROTOTYPE

Our technical team start working on a prototype, which we test and verify meets your tank heights and expected performance.

## GETTING YOUR KIT APPROVED

This sample prototype kit can be sent to you for your in-house trial installation, functional flow testing and approval for sign off.

## ACCEPTING FORWARD ORDERS

We accept forward orders to meet your production schedules, so your tanks are ready to meet your customers' quoted lead times.

## ASSEMBLING YOUR PUMP KITS

Your kits are assembled in our on-site build room by one of our engineers, and are then inspected by a second engineer.

## ADDITIONAL IN-HOUSE TESTING

We can provide additional testing using innovative in-house machines before dispatch for your confidence in the finished product.

## DISPATCHING YOUR PUMP KITS

Your order is packed safely and dispatched as a ready-to install kit for your engineers to add to your tank saving you time and money.
